## Flex Kiosk

Winner of an Australian DesignMark in 2004 for design excellence, the FLEX combines striking aesthetic appeal with practical functionality.

With a unique adjustment mechanism, the FLEX is suitable in a range of environments. Comprised of three settings from a full standing vertical configuration to suit taller users, to a fully-lowered configuration to suit seated or wheelchair users, the FLEX meets the needs for a variety of users.

Combining its elegant aesthetics with a high resolution 17" LCD screen, the FLEX is ideal for high quality installations such as galleries and museums. The design makes the FLEX suitable for use in other applications such as educational institutions, libraries and other retail and service environments where accessibility for the disabled is an important consideration.

### FEATURES
